

Practical UI & UX Design (2026)
Bad Usability
Roni Pihajoki
2/5/2026

The site I chose for this is igloo.inc

Dont get me wrong the site does look absolutely stunning.

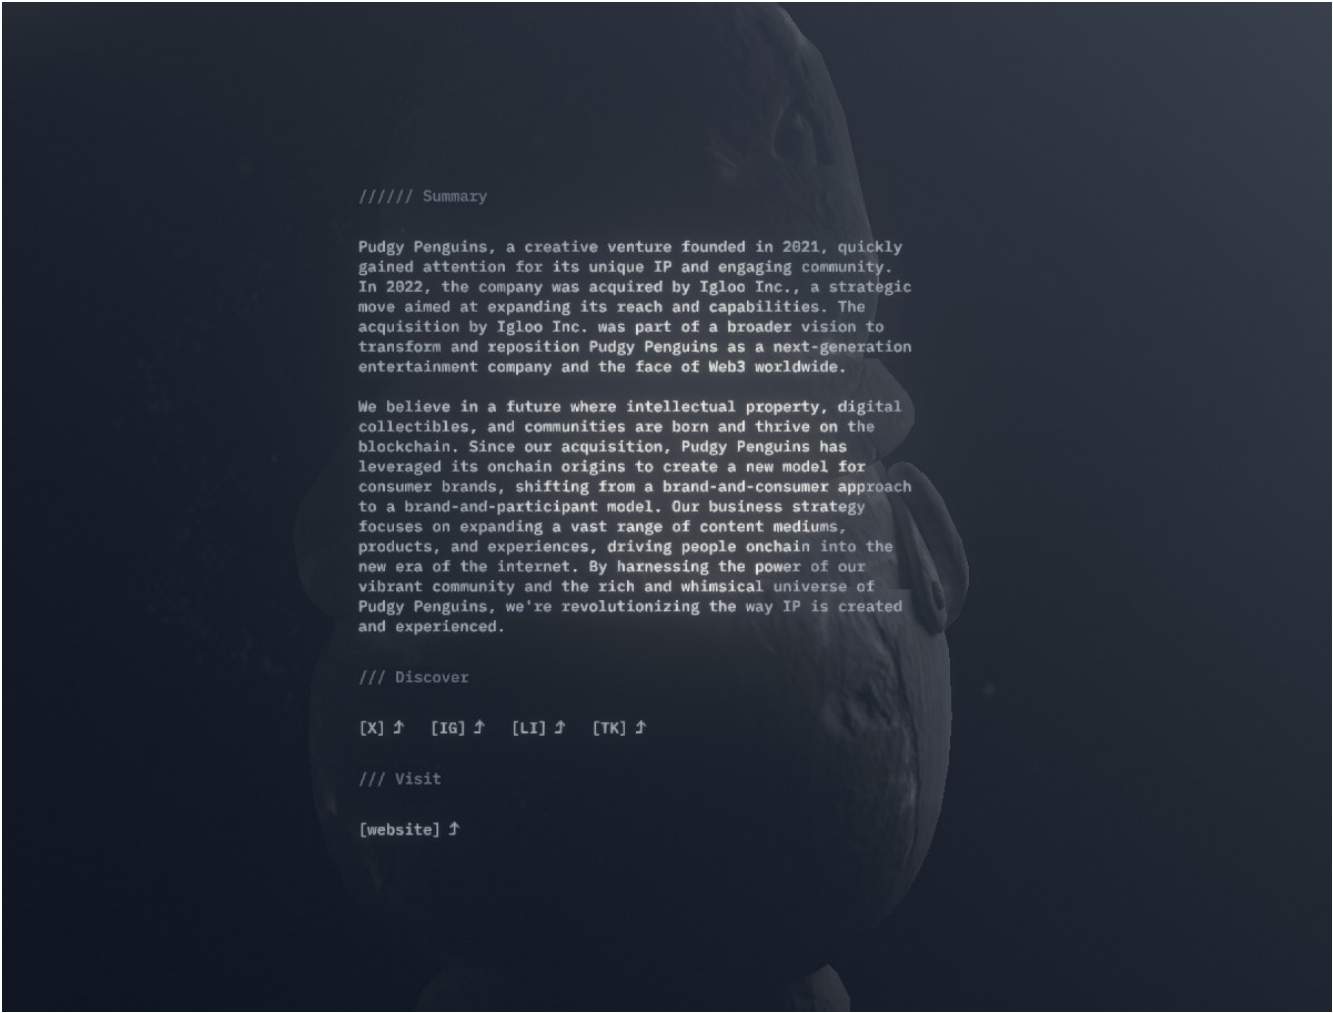

The graphics are amazing, 3D-effects, sound effects everything about it, but at the same time that is its downfall.

To view anything you could click open or view more details then shown in the photo you have to scroll.

Here is another photo for the next “section” of the site I scrolled to.

We get this animation generating the text, the text keeps moving even if we are not scrolling, there is mist layering on top of it. This could be an issue for someone. Lets now “Click to explore” and see what we find.

```
///// Summary
```

Pudgy Penguins, a creative venture founded in 2021, quickly gained attention for its unique IP and engaging community. In 2022, the company was acquired by Igloo Inc., a strategic move aimed at expanding its reach and capabilities. The acquisition by Igloo Inc. was part of a broader vision to transform and reposition Pudgy Penguins as a next-generation entertainment company and the face of Web3 worldwide.

We believe in a future where intellectual property, digital collectibles, and communities are born and thrive on the blockchain. Since our acquisition, Pudgy Penguins has leveraged its onchain origins to create a new model for consumer brands, shifting from a brand-and-consumer approach to a brand-and-participant model. Our business strategy focuses on expanding a vast range of content mediums, products, and experiences, driving people onchain into the new era of the internet. By harnessing the power of our vibrant community and the rich and whimsical universe of Pudgy Penguins, we're revolutionizing the way IP is created and experienced.

```
/// Discover
```

```

```
/// Visit
```

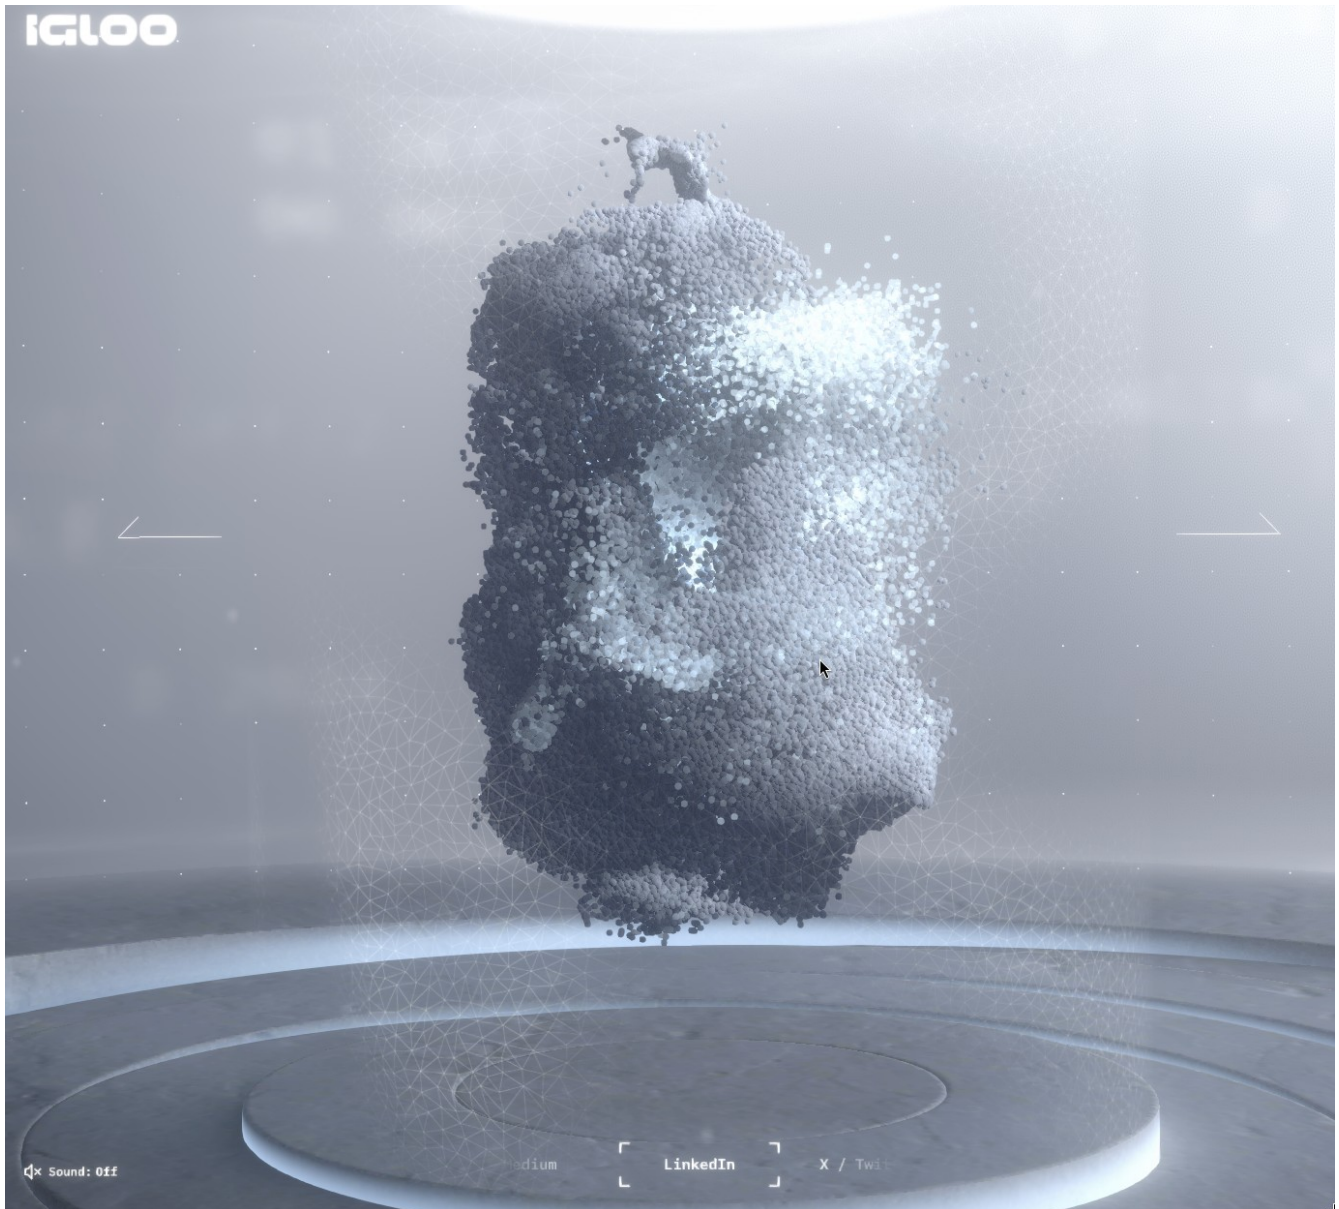

```
[website] ↑
```

This is what opens up. The mouse has an animation creating a “white glow” that moves under the text.

This effects the readability of the text & has some stuttering in the animations.

The links under /// Discover could give little bit more context to the user.

Lets keep on going through the site.

Going back to the main site & scrolling bit more we get to an portal and after traveling through it we end up with these balls generating icons/objects. They move around when mouse travels over them, you can transform them to different icons for specific services (LinkedIn as displayed here, X/Twitter & Medium)

Scrolling more we get back to the starting point of the igloo. The site is stunning as stated & has amazing animations.

But lets now look at the functionalities of bad usability.

Learnability

I think the scrolling to view content with animations is a cool feature, but I don't think it is very accessible with most users.

I could not see my parents for example navigating the site.

(I would certainly be worried if my parents would be visiting Crypto/NFT sites.)

The amazing design does not convert to amazing functionality.

I would say the sites learnability is not great, unless you have visited such "Scrolling Design Sites" before.

Also believe there to be too much animations, that could be an issue for some users.

Efficiency

Once users have learned the design, how quickly can they perform tasks?

Going through the site is quite slow, going back and forward with scroll-wheel

(Considering page up & page down does not work)

There is no fast way to open a specific site or link you want to visit.

Satisfaction

I have listed this here even though I don't believe it being a bad case.

The site is very satisfying visually & moving through the site sure is intriguing.
